

Recursively Enumerable and Recursive Languages

class 18

1

Definition:

A language is **recursively enumerable**
if some Turing machine accepts it

2

Let L be a recursively enumerable language
and M the Turing Machine that accepts it

For string w :

if $w \in L$ then M halts in a final state

if $w \notin L$ then M halts in a non-final state
or loops forever

3

Definition:

A language is **recursive**
if some Turing machine accepts it
and halts on any input string

In other words:

A language is recursive if there is
a membership algorithm for it

4

Let L be a recursive language
and M the Turing Machine that accepts it

For string w :

if $w \in L$ then M halts in a final state

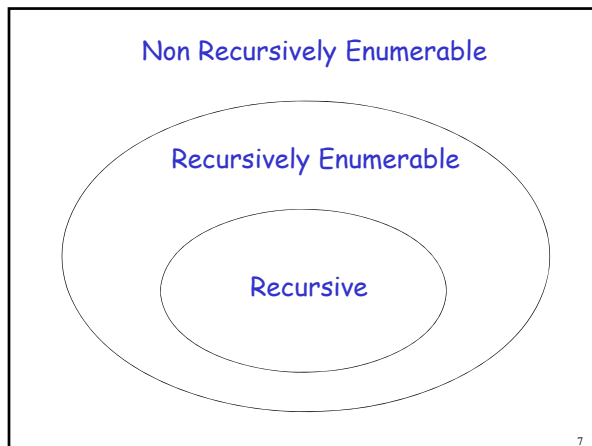

if $w \notin L$ then M halts in a non-final state

5

We will prove:

1. There is a specific language
which is not recursively enumerable
(not accepted by any Turing Machine)
2. There is a specific language
which is recursively enumerable
but not recursive

6

A Language which
is not
Recursively Enumerable

8

We want to find a language that
is not Recursively Enumerable

This language is not accepted by any
Turing Machine

9

Consider alphabet $\{a\}$

Strings: $a, aa, aaa, aaaa, \dots$

$a^1 \ a^2 \ a^3 \ a^4 \ \dots$

10

Consider Turing Machines
that accept languages over alphabet $\{a\}$

They are countable:

$M_1, M_2, M_3, M_4, \dots$

11

Example language accepted by M_i

$L(M_i) = \{aa, aaaa, aaaaaa\}$

$L(M_i) = \{a^2, a^4, a^6\}$

Alternative representation

	a^1	a^2	a^3	a^4	a^5	a^6	a^7	\dots
$L(M_i)$	0	1	0	1	0	1	0	\dots

12

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

13

Consider the language

$$L = \{a^i : a^i \in L(M_i)\}$$

L consists from the 1's in the diagonal

14

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

$L = \{a^3, a^4, \dots\}$

15

Consider the language \bar{L}

$$L = \{a^i : a^i \in L(M_i)\}$$

$$\bar{L} = \{a^i : a^i \notin L(M_i)\}$$

\bar{L} consists of the 0's in the diagonal

16

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

$\bar{L} = \{a^1, a^2, \dots\}$

17

Theorem:

Language \bar{L} is not recursively enumerable

18

Proof:

Assume for contradiction that \bar{L} is recursively enumerable

There must exist some machine M_k that accepts \bar{L}

$$L(M_k) = \bar{L}$$

19

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

Question: $M_k = M_1$?

20

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

Answer: $M_k \neq M_1$

$a^1 \in L(M_k)$
 $a^1 \notin L(M_1)$

21

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

Question: $M_k = M_2$?

22

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

Answer: $M_k \neq M_2$

$a^2 \in L(M_k)$
 $a^2 \notin L(M_2)$

23

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

Question: $M_k = M_3$?

24

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

Answer: $M_k \neq M_3$

$a^3 \notin L(M_k)$
 $a^3 \in L(M_3)$

25

Similarly: $M_k \neq M_i$ for any i

Because either:

$a^i \in L(M_k)$ or $a^i \notin L(M_k)$
 $a^i \notin L(M_i)$ or $a^i \in L(M_i)$

26

Therefore, the machine M_k cannot exist

Therefore, the language \bar{L}
 is not recursively enumerable

End of Proof

27

Observation:

There is no algorithm that describes \bar{L}

(otherwise \bar{L} would be accepted by
 some Turing Machine)

28

Non Recursively Enumerable

\bar{L}

Recursively Enumerable

Recursive

29

A Language which is
 Recursively Enumerable
 and not Recursive

30

We want to find a language which

Is recursively enumerable

There is a Turing Machine that accepts the language

But not recursive

The machine doesn't halt on some input

31

We will prove that the language

$$L = \{a^i : a^i \in L(M_i)\}$$

Is recursively enumerable but not recursive

32

	a^1	a^2	a^3	a^4	...
$L(M_1)$	0	1	0	1	...
$L(M_2)$	1	0	0	1	...
$L(M_3)$	0	1	1	1	...
$L(M_4)$	0	0	0	1	...

$L = \{a^3, a^4, \dots\}$

33

Theorem:

The language $L = \{a^i : a^i \in L(M_i)\}$

is recursively enumerable

34

Proof:

We will give a Turing Machine that accepts L

35

Turing Machine that accepts L

For any input string w

- Compute i , for which $w = a^i$
- Find Turing machine M_i
(using an enumeration procedure for Turing Machines)
- Simulate M_i on input a^i
- If M_i accepts, then accept w

End of Proof

36

Observation:

Recursively enumerable

$$L = \{a^i : a^i \in L(M_i)\}$$

Not recursively enumerable

$$\bar{L} = \{a^i : a^i \notin L(M_i)\}$$

(Thus, also not recursive)

37

Theorem:

The language $L = \{a^i : a^i \in L(M_i)\}$
is not recursive

38

Proof:

Assume for contradiction that L is recursive

Then \bar{L} is recursive:

Take the Turing Machine M that accepts L

M halts on any input:

If M accepts then reject

If M rejects then accept

39

Therefore:

\bar{L} is recursive

But we know:

\bar{L} is not recursively enumerable
thus, not recursive

CONTRADICTION!!!!

40

Therefore, L is not recursive

End of Proof

41

Non Recursively Enumerable

\bar{L}

Recursively Enumerable

L

Recursive

42

Turing acceptable languages and Enumeration Procedures

43

We will prove:

- (weak result)
• If a language is recursive then
there is an enumeration procedure for it
- (strong result)
• A language is recursively enumerable
if and only if
there is an enumeration procedure for it

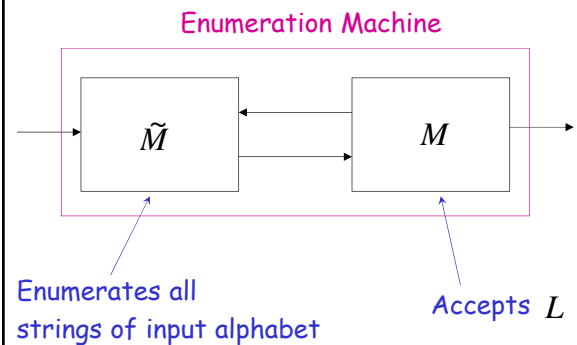

44

Theorem:

if a language L is recursive then
there is an enumeration procedure for it

45

Proof:

46

If the alphabet is $\{a,b\}$ then
 \tilde{M} can enumerate strings as follows:

a
 b
 aa
 ab
 ba
 bb
 aaa
 aab
 \dots

47

Enumeration procedure

Repeat:

\tilde{M} generates a string w

M checks if $w \in L$

YES: print w to output

NO: ignore w

End of Proof

48

Example: $L = \{b, ab, bb, aaa, \dots\}$

\tilde{M}	$L(M)$	Enumeration Output
a		
b	b	b
aa		
ab	ab	ab
ba		
bb	bb	bb
aaa	aaa	aaa
aab		
.....

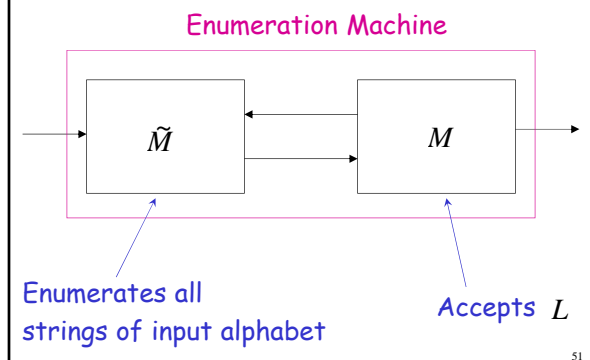

49

Theorem:

if language L is recursively enumerable then there is an enumeration procedure for it

50

Proof:

51

If the alphabet is $\{a, b\}$ then \tilde{M} can enumerate strings as follows:

a
 b
 aa
 ab
 ba
 bb
 aaa
 aab

52

NAIVE APPROACH

Enumeration procedure

Repeat: \tilde{M} generates a string w
 M checks if $w \in L$
 YES: print w to output
 NO: ignore w

Problem: If $w \notin L$
 machine M may loop forever

53

BETTER APPROACH

\tilde{M} Generates first string w_1
 M executes first step on w_1

 \tilde{M} Generates second string w_2
 M executes first step on w_2
 second step on w_1

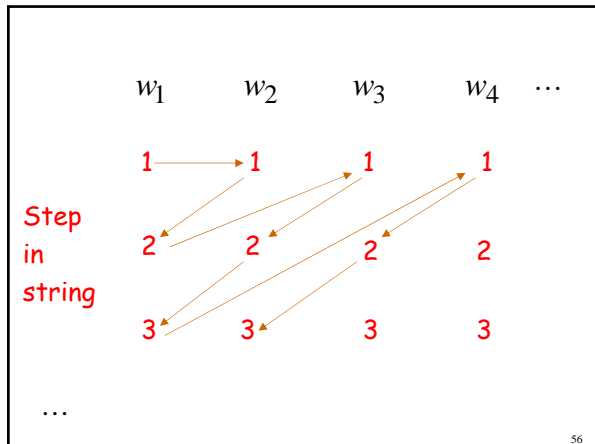

54

\tilde{M} Generates third string w_3

M executes first step on w_3
 second step on w_2
 third step on w_1

And so on.....

55

56

If for any string w_i
 machine M halts in a final state
 then it prints w_i on the output

End of Proof

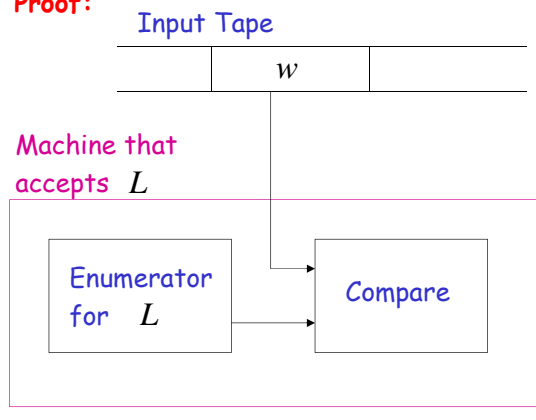

57

Theorem:

If for language L
 there is an enumeration procedure
 then L is recursively enumerable

58

Proof:

59

Turing machine that accepts L

For input string w

Repeat:

- Using the enumerator, generate the next string of L
- Compare generated string with w
 If same, accept and exit loop

End of Proof

60

We have proven:

A language is recursively enumerable
if and only if
there is an enumeration procedure for it

61
